

NAVENTIK

ENABLING SATELLITE NAVIGATION

FOR AUTOMATED DRIVING

SENIOR C++ SOFTWARE ENGINEER AUTOMOTIVE (M/F)

Full-time, Open-ended, Location Chemnitz

Autonomous driving, ADAS, Shared Mobility, Connected Cars, Car2X, Mobility as a Service - the new era of mobility has already begun. Right in the middle of it, NAVENTIK develops a software-based localization technology with integrated GPS receivers. It addresses the requirements of highly automated and autonomous driving and guarantees both safety and quality standards. As a pioneer and driving force of future mobility, we have been recognized as the regional most innovative automotive start-up. Following our successful market entry, we now want to grow by further developing and implementing our solutions. Are you ready to revolutionize mobility? Then join us as

YOUR TASKS

- ✔ Implementation of algorithms in the field of signal processing and sensor fusion with your team
- ✔ Active and result-oriented leading of projects in pre-series development for satellite navigation
- ✔ Integration of project results into the product development cycle and further development of requirements specification

REQUIRED SKILLS

- ✔ After studying computer science, engineering or natural sciences, you have several years of professional experience in the software development in a technology company
- ✔ You program very well in C++; alternative programming skills as C, C# or MATLAB are desired
- ✔ Good German language skills
- ✔ You like to take responsibility and motivate your team members

WE OFFER

- ✔ Attractive salary and a modern working environment in Chemnitz's probably most beautiful office
- ✔ Scope for co-design & long-term development in a solidly financed start-up
- ✔ Training in direct cooperation with the founders
- ✔ Individual possibilities for further education, flexible working hours & diverse team events
